# Research Lines

## Product Engineering

It focuses on the design and development of innovative products, taking into account technical, functional and aesthetic aspects.

## Product Design and Development Methodologies

It focuses on the application of various methodologies and approaches to improve the product design and development process.

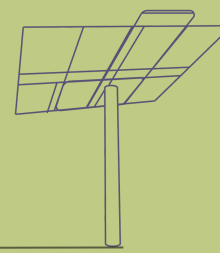

## Human Factors in Product Design

It studies how products adapt to the needs, capabilities and preferences of users.

## Design Management and Innovation

It focuses on the efficient management of the product design process. Includes planning, coordination and monitoring of design projects, ensuring that objectives are met within established deadlines and budgets.

# Some Projects

## Serena

Electrosolar boat.

## SASVAR

Intelligent waste separation system.

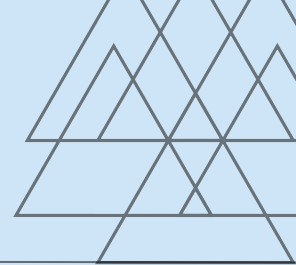

## Proagro-prosthesis

Understanding the prosthetic needs of amputees who work in the agricultural sector.

# About us

Research Group composed of professors and researchers with relevant scientific and technological projects.

Develops innovative products and services to improve and expand knowledge, and provide feedback to industry, academia and society.
